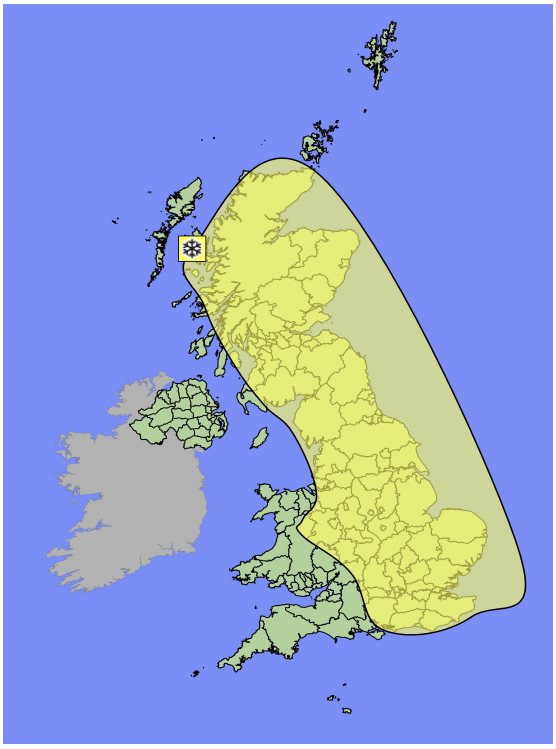
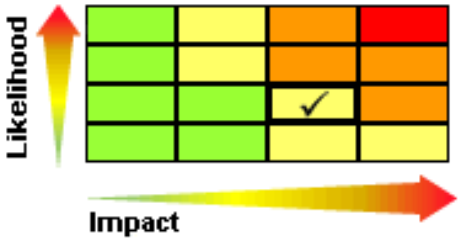
National Severe Weather Warning Service





Chief Forecasters Assessment
Although there is still some uncertainty over the detail there is an increasing risk of significant snowfall associated with a frontal system moving into northwest Scotland by early Monday and extending southeastwards through the day.

Following showers in the north and east during Sunday, icy surfaces will be an additional hazard during Monday morning.

The Met Office have issued a **Yellow Alert** of **Snow**

Valid from **00:05 on Mon, 14th Jan 2013** until **23:59 on Mon, 14th Jan 2013**

An area of rain, sleet and hill snow spreading into northwestern Scotland by early Monday is expected to turn increasingly to snow to low levels as it moves southeastwards through the day. Some significant accumulations of around 5 cm of snow are likely over low ground with perhaps 10 cm or more over higher ground.

Icy surfaces will be an additional hazard, particularly during Monday morning.

The public should be aware of the risk of disruption to travel.
